# Plant a Mangrove

**Mangroves are the unsung heroes of ocean health and are essential for the health of the planet.**

**Mangroves are saltwater rooted trees that line the coast, providing habitat to millions of animals and sequestering carbon.**

**They sequester 5 times more carbon than rainforests and up to 10 times more carbon than any terrestrial forest, trap pollutants, and protect coastal communities from increasingly extreme weather while also providing sustainable livelihoods.**

**Support for healthy mangrove forests supports a holistic global impact for all.**

## **Tu B'Shevat is the New Year of Trees.**

Tu B'Shevat teaches that, as Jews, we are expected to be stewards of the environment. It is customary to plant a tree for this holiday, but not all trees are created equal.

**Repair the Sea is proud to partner with WELL/BEINGS to offer you an opportunity to plant a tree of the sea for Tu B'Shevat.**

**You can plant a single mangrove for \$36, or a thicket of mangroves for \$360.**

**100% of your donation will go towards planting and maintaining mangroves.**
